mSecure Account Authentication

mSecure applies an additional layer of security to your mSecure account by encrypting your data with a very long and random password, known as an Account Key. Your Account Key is displayed below as a QR Code.

Account Key QR Code

This Account Key is required, along with your username and password, to authenticate you as the owner of your mSecure account the first time you launch the app on a new device, or after reinstalling the app on an existing device.

Please save this email in a secure location where you will be able to access it in the future on this and other devices.

Encrypted Account Key
