# Android

The sync option is an account wide option. If you change the sync setting on one device, any other device or computer that you are signed in to in mSecure will also be updated to use the new sync option. However, you will need to link your Dropbox account all all devices. Please make sure to link mSecure to your Dropbox account in the mSecure settings of each device you use.

1. Open and unlock mSecure 5
2. Tap the menu icon
3. Tap "Settings"
4. Tap "Sync Settings"
5. Tap "Change Sync Settings"
6. Select "Dropbox"
7. Tap Ok
8. Link or allow mSecure access to your Dropbox account

Then it goes to Dropbox who is asking me my password (I also remove the password to check if it was a Password issue)

Few seconds after, I got this this error message in French saying " the application was not setup correctly and then could not access to you Dropbox".

It seems for me that Dropbox does not allow mSecure to retrieve the Data file.

By the way, mSecure is still working / Syncing properly on my old device.
